Confirmed COVID-19 Cases and Tests Performed in MetroWest by City/Town, Jan. 1, 2020–November 13, 2021

Selected communities from MDPH data

Data are current as of 11/18/2021; For populations <50,000, <5 cases are reported as such or suppressed for confidentiality purposes.

1 DPH has done away with the color coding risk system.

2 Number of new cases occurring over the current two-week period compared to the previous two-week period. *Please see DPH documentation for exact dates.* Higher=number of new cases in the current two-week period higher than the number of new cases during the last two-week period. Lower=number of new cases in the current two-week period lower than number of new cases during the last two-week period. No change=number of new cases in current two-week period is equal to the number of new cases during the last two-week period.

3 Change in percent positivity compared to the previous week's report. No Change= <0.10% difference in the percent positivity. DPH calculates rates per 100,000 population using denominators estimated by the University of Massachusetts Donahue Institute using a modified Hamilton-Perry model (Strate S, et al. Small Area Population Estimates for 2011 through 2020, report, Oct 2016.)

4 The average testing rate over the last two weeks (14 days). Testing rates are calculated from the number of tests conducted in the geographic area divided by the population denominator (the number of people living in that geographic area), then multiplying by 100,000 to get a rate that can be compared.

As of 11/5/2020, the Massachusetts Department of Public Health is using the 2019 population estimates, the most current available data. Please note: Data for these tables are based on information available in the DPH surveillance database at a single point in time. Case counts for specific cities and towns change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information (assigning cases to their city or town of residence) is obtained.
