Confirmed COVID-19 Cases and Tests Performed in MetroWest by City/Town, Jan 1, 2020–Sept 30, 2020

Selected communities from MDPH data

Data are current as of 8am on 9/30/2020; **For populations <50,000**, <5 cases are reported as such or suppressed for confidentiality purposes.

¹ **Gray**:<5 reported cases in the last 14 days; **Green**: Average daily case rate over the last 14 days: <4 cases per 100,000 population; **Yellow**: Average daily case rate over the last 14 days: 4-8 cases per 100,000 population; **Red**: Average daily case rate over the last 14 days: >8 cases per 100,000 population.

²Number of new cases occurring over the current two-week period (9/13/2020 – 9/26/2020) compared to the previous two-week period (9/6/2020 – 9/19/2020). **Higher**=number of new cases in the current two-week period higher than the number of new cases during the last two-week period.

Lower=number of new cases in the current two-week period lower than number of new cases during the last two-week period. **No change**=number of new cases in current two-week period is equal to the number of new cases during the last two-week period.

³Change in percent positivity compared to the previous week's (9/23/2020) report. **No Change**= <0.10% difference in the percent positivity. DPH calculates rates per 100,000 population using denominators estimated by the University of Massachusetts Donahue Institute using a modified Hamilton-Perry model (Strate S, et al. Small Area Population Estimates for 2011 through 2020, report, Oct 2016.)

Please note: Data for these tables are based on information available in the DPH surveillance database at a single point in time. Case counts for specific cities and towns change throughout the day as data cleaning occurs (removal of duplicate reports within the system) and new demographic information (assigning cases to their city or town of residence) is obtained.
